

# EVERYTHING OLD IS NEW AGAIN

## Two approaches, same high quality:

**Exchange parts are as good  
as new. And sometimes  
even better!**

The Volkswagen Group ranks among the top car manufacturers worldwide when it comes to sustainability.

In a worldwide process, old parts are industrially remanufactured under the Volkswagen Genuine Exchange Parts label. They are given a new lease on life and returned to the parts supply cycle, thus saving enormous amounts of energy and raw materials. Volkswagen launched the exchange program over six decades ago.

The exchange program has made impressive accomplishments. The amount of steel saved by engine remanufacturing alone would be enough to build an additional 50 Eiffel Towers in Paris.

## Why choose Genuine Exchange Parts?

When talking about exchange parts, it's important to note that these remanufactured components offer the same quality as new parts.

Volkswagen has been in the business of remanufacturing parts for over 6 decades. In order to make old parts new again

Volkswagen has dedicated an entire plant to this process. Located in Kassell, Germany, this manufacturing plant is unlike any other in the world and achieves a level of quality that is identical to Volkswagen's new car production.

## Benefits to my workshop

Volkswagen Genuine Exchange Parts® allows mechanical workshops to purchase with the same confidence as they would with all Volkswagen Genuine Parts®.

They offer the same quality and identical 2 year unlimited kilometre warranty\* and are attractively priced due to savings in energy and materials. Advances in technical engineering are applied to the remanufacturing process meaning that an Exchange Part can offer a higher technical standard than the old part it is replacing. You can rest assured in the reputation of your business, knowing your customers are getting Volkswagen Genuine Exchange Parts®.

## An overview of the selection of products:

### Engine components:

Engines, base and short engines, intake manifolds, oil coolers, water pumps, cylinder heads.

### Clutch and gearbox components:

Final drives, automatic gearboxes, double-clutch gearboxes (DSG), manual gearboxes, clutch pressure plates, clutch discs, clutch sets, planetary gears, actuator components for control valve assemblies, flywheels, converters.

### Axle, brake and steering components:

Drive shafts and CV joint sets, propeller shafts, steering gears, power steering pumps.

### Fuel-air mixture components:

Injectors, injection pumps, fuel distributors, pump injection units, turbochargers, vacuum pumps.

### Electrical and electronic components:

Starters, alternators, alternator regulators, instrument clusters, air flow meters, navigation units, windscreen wiper motors, control units, TV receivers, amplifiers, ignition distributors.

**Other components:** Convertible tops, diesel particulate filters, catalytic converters and air conditioning compressors.

### Volkswagen Genuine Exchange Parts®
