

# GLOVES

**Gloves should be worn for any contact with body substances or objects contaminated by body substances.**  
**Gloves are NOT a substitute for proper hand hygiene.**

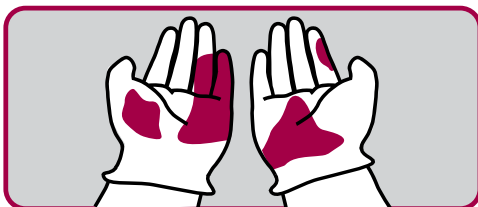

## Change gloves and perform hand hygiene

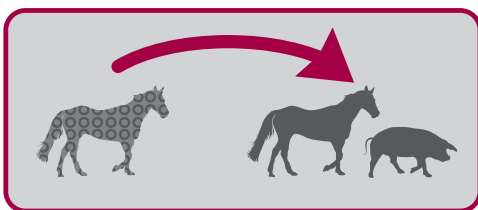

- when moving from dirty to clean areas on the same animal

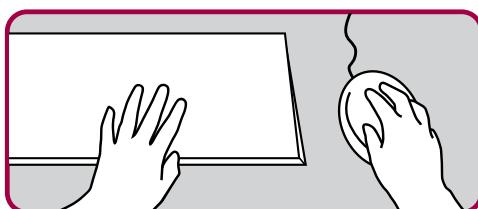

- when moving from dirty to clean procedures on the same animal

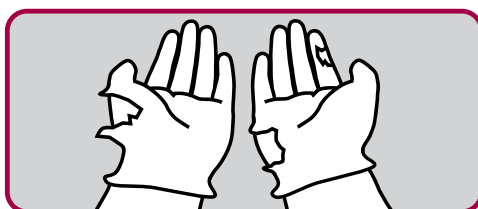

- after contact with blood or body substances

- between individual animals

- before touching equipment such as computer keyboards during patient care

- if gloves become torn or damaged.
